Skin and bodycare: creams, gels, balms, ointments, masks, make up, powder, scrubs ...

Haircare

Scents: lavender, potpourri, candles

Food: tea, spices, tabs and sweets

Household: Wax, polish

ALUMINIUM ASSETS:

- **Barrier material:** Protection against light, moisture, hydrogen and oxygen. Fugitive substances of the formula cannot escape.
- **Corrosion resistance** (well suited for humid area)
- **Unbreakable & light**
- **Infinitely recyclable (even with decoration and varnish)** without losing the technical characteristics
- **Lower carbon footprint** (compare to glass and plastic)
- **Recycled aluminum (PIR or PCR):**
As part of our sustainable development approach, all of our aluminum bottles and jars are made from recycled PIR (Post Industrial Recycled) Aluminum, which comes from waste collected in factories. The use of recycled aluminum allows, among other things, to reduce by 95% the energy needed to produce virgin aluminum, the raw material used (Bauxite) but also the emission of CO2
- **BPA free varnish** (bottles and jars): To meet the European requirements EMBELIA adapts its offer and proposes from stock aluminium bottles with an BPA free inner varnish. The selected varnish has a good chemical resistance and is perfectly adapted to the internal protection of aluminium bottles.

DECORATION

Various **finishing** are possible and make your bottle **UNIQUE:**

DECORATION ON BOTTLES

Offset decoration on aluminium

Very precise technology divided into 3 mains phases:

1- Basecoat

- White: for an excellent rendering of non-metallic colors
- Transparent: to keep the metallic aspect of the bottle
- Customized in accordance with customer target

2- Offset decoration 1 to 6 colors or 6 colors + hot stamping

3- Overcoating varnish

Shiny semi-matt (various formulations possible according to the target...), matt and SOFT TOUCH (velvet aspect)

Hot stamping: Gold, silver as standard but always tailor-made according to a precise brief (holographic foils, colors...)

To know:

In some cases, gold offset can be offered in substitution of Hot stamping)

Embossing: Allows customization with a mechanical deformation in the body of the bottle

Assets:

- Protection of the brand (hardly repeatable)
- Unique feel

DECORATION ON JARS

We offers a customization of the jars : **embossing, lacquering, digital printing** on the top of the lid or on bottom of the jar.

This technology allows precise and high-quality decoration.

SOME DECORATION EXAMPLES

Transparent **Base coat** which keep the metallic effect and degraded offset

Silver **Hot stamping** and Offset decoration

Digital printing

Powder pink, gold **Hot stamping**

Embossing
